

Disaster Mastermind

Farming Communities, Primary Producers and Industry Groups.

Following emergency events farming communities and primary producers face numerous hurdles to recovery including reduced access to essential services and resources, disruption to transport networks and communications and isolation.

This has a follow on effect for agribusiness and industry groups and can result in long term and significant loss of productivity in the animal and agricultural sector.

Disaster Mastermind specialises in providing services to plan for emergencies in rural and farming communities.

Our service aims to build capability and resilience through the development of planning tools and practices which reflect the unique challenges faced by those involved in animal and agricultural production and business.

Disaster Mastermind works with government agencies in the animal and agriculture sector, primary producers, industry groups and other agribusiness to prepare and plan for emergencies by:

- Identifying risks and hazards
- Developing localised plans and strategies to mitigate and reduce impacts.
- Developing practical tools for on-farm emergency readiness.
- Working with industry groups to develop targeted readiness strategies and programs.
- Developing Business Continuity plans for primary producers and agribusiness.
- Tailoring face to face and e-learning training programs for government agencies, industry and agribusiness to build knowledge and skills in emergency management practices.
